FOREWORD

It is our pleasure to welcome you to the Master of Science in Operations Management programme offered by the Department of Logistics and Maritime Studies at The Hong Kong Polytechnic University.

This programme aims to provide you with the needed foundation in the main functional areas of management, along with in-depth training in the realm of Operations Management.

This Programme Document contains important information that is of direct relevance to your studies. You are strongly advised to read it carefully and use it as a guide for working out your study plan.

We wish you an enjoyable and rewarding experience with the University.

With warmest regards

Prof. Andy Yeung Head, Department of Logistics and Maritime Studies

PART I: GENERAL INFORMATION

1. PROGRAMME OVERVIEW

The Master of Science in Operations Management programme provides students with skills and knowledge in the efficient and effective management of operations, and is relevant for those working in services and manufacturing, in both private and public sectors. It introduces the concepts and tools needed for managing the resources of an organization to achieve efficient production and distribution of goods and services. The organizations involved could be factories, hospitals, the police force, airlines, airports and docks, distribution depots, hotels and restaurants, and so on. Particular subjects deal with quantitative techniques, decision-making, quality management, resource planning, information technology and e-commerce.

2. PROGRAMME AIMS AND FEATURES

This programme provides non-business graduates with the foundation they need in the main functional areas of management, and offers graduates in all disciplines with in-depth training in operations management.

The features of the programme are:

- (i) Operations management in services and manufacturing
- (ii) Resources management in private and public sectors
- (iii) Quantitative techniques, decision-making, quality management, resource planning, information technology, and e-commerce
- (iv) Development of ability to contribute to a cross-functional, team environment
- (v) Independent investigation into specific management problems

3. PROGRAMME LEARNING OUTCOMES

On completion of the programme, the student is able to:

1. Solve business problems

Learning objective: Demonstrate an understanding on how to apply the latest technologies to solve business management issues

(addressed by subject(s): AF5108 Accounting for Managers, LGT5105 Managing Operations Systems, LGT5109 International Operations Management LGT5426 Managing Innovation)

- 2 Develop the specific operations management knowledge Learning objective: Assess the applications of specialised operations management knowledge and information technologies:
 - a. Operations Strategy Stream
 - b. Quality Management Stream
 - c. Operations Analytics Stream

(Addressed by subject(s):

(For Operations Strategy Stream)
 LGT5033 Lean Thinking and Practice,
 LGT5073 Risk Management in Operations,
 MM531 Strategic Management

- (For Quality Management Stream)
 LGT5107 Total Quality Management,
 LGT5157 Six Sigma and Quality Management,
 LGT5158 Statistical Quality Control for Manufacturing and Service
- (For Operations Analytics Stream) LGT5113 Enterprise Resource Planning, LGT5425 Business Analytics, MM544 E-commerce
- Practise business ethics
 Be attentive and responsive to ethical issues with respect to the application of the latest technologies in business context.
 (addressed by subject(s):
 LGT5105 Managing Operations Systems)

4. ENTRANCE REQUIREMENTS

The minimum entrance requirements for this award are:

- (i) A Bachelor's degree or equivalent professional qualifications, preferably with at least one year of relevant working experience.
- (ii) Applicants with other post-secondary qualifications, who have been employed in industry, commerce, or public administration for not less than 6 years, of which 3 years in a managerial capacity, will also be considered.

If you are not a native speaker of English and your Bachelor's Degree or equivalent qualification was awarded by an institution at which the medium of instruction is not English, you are expected to fulfill the University's minimum English language requirement for admission. Please refer to the "Admissions Requirements" section of Study@PolyU for details.

5. PROGRAMME STRUCTURE

5.1 <u>Programme Information</u>

Programme Code and Title: 44092 Master of Science in Operations Management

Award: Master of Science in Operations Management

Medium of Instruction: English

5.2 <u>Credit Requirements</u>

Students are required to obtain the credit requirements specified below for the relevant award:

Award	No. of Credits	No. of Required Subject	S
MSc	30	4 Compulsory Subjects	+
		3 Specialised Subjects	+
		1 Restricted Elective Subject	+
		2 Free Elective Subjects	
PgD	21	4 Compulsory Subjects	+
		3 Specialised Subjects	

The programme is leading to the Master of Science in Operations Management award. Students admitted to the MSc programme may apply for early exit with a Postgraduate Diploma (PgD), subject to meeting the specified credit requirements.

Students who subsequently decide to graduate with a PgD must apply to the Department of Logistics and Maritime Studies by submitting an application for graduation Form AR84c.

5.3 Mode and Normal Duration for Completion of a Programme

The academic year is organized into Semester 1 (13 weeks), Semester 2 (13 weeks) and Summer Term (7 weeks), where appropriate.

Classes will be scheduled on weekday evenings or weekends. Summer Term will be utilized for those who want to spread out more evenly their learning or take advantage of Summer Term to complete the programme within the normal duration of programme but it is not mandatory for students.

The number of class contact hours will depend on the approach to learning and teaching adopted in the subject. While students' effort need not necessarily be defined in terms of class contact, most subjects require 39 hours of class contact. In a regular semester, most subjects have 3 hours contact time per week. Actual number of class meetings may vary in light of certain conditions in the offering semester, such as the arrangement of public holidays, or other pedagogical needs of subject lecturers.

Programme Code	44092	-OFM	44092-OPM		
Mode of Attendance	Full-	time	Part-time		
Award	Master of Science (MSc)	Postgraduate Diploma (PgD)	Master of Science (MSc)	Postgraduate Diploma (PgD)	
Proposed Normal Duration	1.5 years	1.5 years	2.5 years	2.5 years	

The duration of the programme is as follows:

MM531 MM544 MM576 MM501	Strategic Manageme E-commerce Marketing Manageme Research Methods					

Subject to university's minimum enrolment requirement, not all subjects will be offered each year. And, registration is subject to the availability of quota.

Starting from 2006/07, students at MSc level are allowed to choose <u>at most 1 elective</u>, equivalent to 3 credits, from the Common Pool to fulfill the elective requirements of the

programme. Please visit the website https://www.polyu.edu.hk/en/fb/study/tpglanding/common-pool-electives/ for subject lists and subject syllabuses. **Students should strictly comply with the prescriptions of the programme curriculum when performing subject registration. Those who fail to meet the programme requirements will** <u>NOT</u> **be allowed to graduate.** Credit transfer/exemption will not be granted for subjects chosen from the Common Pool unless the elective subject concerned falls within the programme curriculum.

5.5 <u>Recommended Progression Pattern</u>

The programme offers a structured progression pattern¹, and students are highly encouraged to follow the pattern to benefit from a cohort-based study. However, being credit-based, the programme allows you the flexibility to proceed at your own pace according to your time commitment and learning needs, while not exceeding the prescribed maximum study period.

Full-time	Year One	Year Two
Semester One	2 Compulsory Subjects <u>AF5108</u> : Accounting for Managers	
	LGT5105: Managing Operations Systems	3 or 4 Subjects
	Plus other subject(s)	
Semester Two	2 Compulsory Subjects LGT5109 International Operations Management	,
	LGT5426 Managing Innovation	7
	Plus other subject(s)	
Summer Term (Optional)	0 or 1 Subject	/

Part-time	Year One	Year Two	Year 3
Semester One	2 Compulsory Subjects <u>AF5108</u> : Accounting for Managers <u>LGT5105</u> : Managing Operations Systems	2 Subjects	0 or 1 or 2 Subjects

¹ Patterned subjects on offer are subject to change without prior notice. Students can enquire the class timetable of the semester concerned via <u>http://www.polyu.edu.hk/student</u> upon release of the relevant class timetable.

Semester Two	2 Compulsory Subjects LGT5109 International Operations Management LGT5426 Managing Innovation	2 Subjects	/
Summer Term (Optional)	0 or 1 Subject	0 or 1 Subject	/

5.6 Curriculum Map

The **institutional learning outcomes** are as follows:

- a. **Professional competence of specialists/leaders of a discipline/profession -** Graduates of PolyU TPg programmes will possess in depth-knowledge and skills in their area of study and be able to apply their knowledge and contribute to professional leadership.
- b. **Strategic thinking -** Graduates of PolyU TPg programmes will be able to think holistically and analytically in dealing with complex problems and situations pertinent to their professional practice. They will be versatile problem solvers with good mastery of critical and creative thinking skills, who can generate practical and innovative solutions.
- c. **Lifelong learning capability -** Graduates of PolyU TPg programmes will have an enhanced capability for continual professional development through inquiry and reflection on professional practice.

The above institutional learning outcomes are appropriately addressed by the totality of the learning outcomes of the MSc in Operations Management programme, as set out in Section 3 of this document.

6. PROGRAMME MANAGEMENT AND OPERATION

A Programme Committee is formed to exercise the overall academic and operational responsibility for the Programme and its development within policies, procedures and regulations defined by the University. Its composition comprises academics and student representatives.

The Programme Director and/or Deputy Programme Director and/or Programme Manager are responsible for the day-to-day management and operation of the programme, student admissions, teaching and learning matters, quality assurance (QA) and programme development. Their prime role is to ensure the programme is delivered according to the established QA mechanism.

7. COMMUNICATIONS WITH STUDENTS

While we work to communicate clearly and in a timely manner with students according to University regulations and procedures, it is the **responsibility of students** to help maintain the effectiveness of the communication process. **Students should ensure that their up-to-date personal and correspondence details are provided** to the University and the relevant departments (e.g. AR, LMS, subject offering departments, etc); and **check relevant correspondence channels regularly** to obtain the latest information regarding their studies and the status of any related applications (e.g. late assessment, appeal of subject results, add/drop of subjects, deferment, etc) lodged. Failure in doing so will not constitute any grounds for appeals/complaints against consequences/decisions of the relevant matters and applications.

8. SUBJECT REGISTRATION

8.1 Add / Drop of Subjects and Change of Subject Groups

If you wish to make changes to your subject registration, you may do so through the add / drop at eStudent during the 2-week add / drop period (one week for Summer Term). You are advised not to make any changes to the subjects preassigned to you by the Department without consulting your Department / Academic Advisor.

In case you wish to drop all the subjects in a semester, you must first seek approval from your Department for zero subject enrolment. (Please refer to Student Handbook section 4I on "Zero Subject Enrolment and Retention of Study Place".)

Otherwise, you will be considered as having decided to withdraw from study on the programme concerned. Dropping of subjects after the add / drop period is not allowed. If you have a genuine need to do so, it will be handled as withdrawal of subject. (Please refer to section 5G on "Withdrawal of Subjects".)

8.2 Withdrawal of Subjects

If you have a genuine need to withdraw from a subject after the add / drop period, you should submit an application for withdrawal of subjects to your programme offering department. Such request will first be considered by the subject teacher concerned and followed by the programme director if there are strong justifications and when the tuition fee of the subject concerned has been settled.

Deadline for requests for subject withdrawal will be specified by the teaching department and in any case, it will not be entertained after the commencement of the examination period.

For approved cases, the tuition fees paid for the withdrawn subjects will not be refunded. The withdrawn subjects will be shown under the "Assessment Result" of eStudent and in the Transcript of Studies.

8.3 Taking Additional Subjects

Subject to the maximum credits allowed, students can take additional subjects **before** graduation to broaden their perspective. The selection of additional subjects will be done during the last two days of the add / drop period. Any requests for dropping the additional subjects after the add / drop period will be treated as subject withdrawal. All subjects will be included in the calculation of GPA while only those subjects within the programme curriculum requirement, including subjects selected to fulfil the Free Elective requirement, will be counted towards the GPA for award classification.

9. SUBJECT EXEMPTION AND CREDIT TRANSFER

Irrespective of the extent of previous study or credits recognised, all students studying at the University should complete at least one third of the normal credit requirement in order to be eligible for the PolyU award.

If you consider your previous study is relevant to your current programme, you may apply for subject exemption or credit transfer.

Subject Exemption

You may be granted exemption from taking certain subjects if you have successfully completed similar subjects in another programme. The credits associated with the exempted subject will not be counted for satisfying the credit requirements of your programme. You should consult your Department and take another subject in its place.

For application:
eStudent
[Application Forms > Applications for Study Related Matters >
(AR41e) Subject Exemption]

You will receive notification from the Department concerned normally within 14 working days.

Credit Transfer

You should submit an application for credit transfer upon your initial enrolment on the programme or before the end of the add / drop period of the first semester of your first year of study. Late applications may not be considered. For students whose tuition fees are charged by credits, a credit transfer fee will be charged.

The validity period of subject credits earned is eight years from the year of attainment, i.e. the year in which the subject is completed, unless otherwise specified by the Department responsible for the content of the subject (e.g. the credit was earned in 2018/19, then the validity period should count from 2019 for eight years). Credits

earned from previous studies should remain valid at the time when the student applies for transfer of credits.

Subject to the terms and conditions stipulated in the Notice of Offer, there is a limit to the maximum number of credits that can be transferred. If the credits attained from previous study are from PolyU, the total credits transferred should not exceed 67% of the required credits for the award. If the credits gained are from other institutions, the total credits transferred should not exceed 50%. In case where both types of credits are transferred, not more than 50% of the required number of credits for the academic award may be transferred. Grades may or may not be given for the transferred credits.

For application:	
eStudent	
[Application Forms > Applications for Study Related Matters > (AR41c) Credit Transfer	1

All credits transferred will be counted for satisfying the award requirements. Transferred credits are normally not counted for meeting the requirements of more than one degree.

Some programmes may accept applicants holding advanced qualifications. If you have an advanced qualification relevant to the programme enrolled, you may be allowed to take fewer credits than what the programme normally requires. However, when you apply for credit transfer, the credits that you are not required to study will also be counted towards the maximum number of transferred credits.

For credit transfer of retaken subjects with grade being carried over, the grade attained in the last attempt should be taken. Students applying for credit transfer for a subject taken in other institutions are required to declare that the subject grade used for claiming credit transfer was attained in the last attempt of the subject in their previous studies. If a student fails in the last attempt of a retaken subject, no credit transfer should be granted, despite the fact that the student may have attained a pass grade for the subject in the earlier attempts.

Students will not be granted credit transfer for a subject which they have attempted and failed in their current study unless the subject was taken by the student as an exchange-out student in his / her current programme.

In case of extenuating circumstances where the application for credit transfer can only be submitted after the first semester of the first year of study, all credit transfers approved will take effect only in the semester for which they are approved. Such students will only be eligible for graduation at the end of that semester, even if the granting of the credit transfer will immediately enable them to satisfy the total credit requirement for the award.

You will receive notification from the Department concerned normally within 14 working days. If you are a credit fee paying student, you will receive a debit note for settling the credit transfer fee, the non-payment of which will nullify the approved credit transfer. A reinstatement fee will be charged if you wish to reinstate the approval for the credit transfer.

10. RETAKING OF FAILED SUBJECTS

Students may only retake a subject which they have failed (i.e. Grade F or S or U). After the announcement of subject results in a semester, you should check whether you have failed any subject via eStudent (please refer to Student Handbook section

6G on "Assessment Results") and arrange for retaking of the subject during subject registration. Retaking of subjects is with the condition that the maximum study load of 21 credits per semester is not exceeded.

The number of retakes of each subject is restricted to **a maximum of two**. The second retake of a failed subject requires the approval of the Faculty / School Board. Students who have failed a compulsory subject after two retakes will be de-registered. Departments may impose more stringent regulations on the retaking of particular types of subjects, e.g. practicum and clinical placement, and should inform students of such cases, if any.

Students can retake a failed subject the first time via eStudent directly during the subject registration period and add/drop period. For a second retake of a failed subject, students should complete form AR160 instead and return it to the programme offering departments to seek approval.

For application, get the form from:	Return it to:			
 AR Website > Students in Taught Programmes > Application Forms Academic Registry Service Centre 	Programme offering department			
Application period:				
Preferably before the start of a new semester, or before the end of add / drop period of each semester.				

When you retake a failed subject, only the grade obtained in the final attempt of the retake will be included in the calculation of Grade Point Average (GPA) and GPA for award classification. Although the original grade will not be included in the calculation of GPAs, it will be shown in the Transcript of Studies. You should refer to the Programme Requirement Document to ascertain the requirements, in particular for subjects offered in consecutive semesters, for retaking failed subjects, or seek advice from the Department concerned.

Students paying credit fee will be charged for the subjects retaken.

11. ZERO SUBJECT ENROLMENT AND RETENTION OF STUDY PLACE*

If you do not wish to take any subject in a semester, you must seek approval from your department to retain your study place* by submitting your application via eStudent before the start of the semester and in any case not later than the end of the add / drop period. Otherwise, your student status with the University will be withdrawn. Please also refer to Student Handbook section 4L(ii) on "Discontinuation of Study" for further details.

Unless otherwise approved, the semesters during which you are allowed to take zero subject will be counted towards the total period of registration (or maximum period of registration for students admitted in or before 2019/20) for the programme concerned.

	For application:
5 1 1	• Applications for Study Related Matters > of Study Place (Zero Subject Enrolment)]

You will receive notification from the Department normally within two weeks. Students who have been approved for zero subject enrolment are allowed to continue using campus facilities including library facilities. A fee of HK\$2,105 per semester for retention of study place will be charged.

12. DEFERMENT OF STUDY

You may apply for deferment of study if you have a genuine need to do so, such as prolonged illness or being posted to work outside Hong Kong. Applications from students who have not yet completed the first year of a full-time programme will be considered only under exceptional circumstances. The deferment period will not be counted towards the total period of registration (or maximum period of registration for students admitted in or before 2019/20).

You are required to submit an application for deferment of study via eStudent to the programme offering department. You will be informed of the result of your application in writing or via e-mail by the Department normally within three weeks from the date of application.

It is necessary for you to settle all the outstanding tuition fees and / or other fees in order to have your application for deferment processed if the application is submitted after the start of a semester. All fees paid are non-refundable and non-transferable. Students approved for deferment of study will normally not be eligible to access the campus facilities / services. Students can check for further details from the relevant service providing units. Alternatively, you may apply for zero subject enrolment to retain your study place.

Students who have been approved for deferment of study can retain their student identity card for use upon their resumption of study. You will be advised to settle the tuition fee and complete the subject registration procedures upon expiry of the deferment period. If you do not receive such notification one week before the commencement of the Semester, you should enquire at the Academic Registry.

For application:

<u>eStudent</u> [Application Forms > Applications for Study Related Matters > (AR7) Deferment of Study] (with supporting documents. Medical certificates are required for application on medical grounds.)

Deadline for application:

Before the commencement of the examination period of the semester concerned.

13. WITHDRAWAL OF STUDY

13.1 Official Withdrawal

If you wish to discontinue your study at the University before completing your programme, it is necessary for you to complete the withdrawal procedure via eStudent. Fees paid for the semester in which you are studying will not be refunded. Applications for withdrawal of study for the current semester must be submitted before the commencement of the examination period. Applications submitted after the commencement of the examination period will not be processed. Applications for withdrawal of study for the following academic year / semester should be submitted before the commencement of that academic year / semester.

Your application will not be processed if you have not cleared outstanding matters with the various departments / offices concerned, such as settling outstanding fees / fines and Library loans and clearing your locker provided by the Student Affairs Office.

The relevant Department will inform you in writing or via e-mail of the result of your application, normally within three weeks after you have cleared all the outstanding items as mentioned above.

Upon confirmation of your official withdrawal, you will be eligible for the refund of the caution money paid if you have no outstanding debts to the University.

All fees paid are non-refundable and non-transferable.

If you discontinue your study at the University without completing proper withdrawal procedures, you will be regarded as having unofficially withdrawn and the caution money paid at first registration will be confiscated.

For application:				
eStudent				
[Application Forms > Applications for Study Related Matters >				
(AR6) Withdrawal of Study]				
Deadline for application:				
Before the commencement of the examination period of the semester concerned.				

13.2 Discontinuation of Study

If you discontinue your study without following the proper procedures for official withdrawal, you will be regarded as having given up your study at the University. In this case, you will not be eligible for the refund of caution money and shall not be considered for re-admission to the same programme / stream (sub-code) in the following academic year.

13.3 De-registration

Students who have been de-registered on grounds of academic failure shall not be considered for re-admission to the same programme / stream (sub-code) in the following academic year.

14. ASSESSMENT METHOD

Students' performance in a subject can be assessed by continuous assessment and/or examinations, at the discretion of the individual subject offering Department. Where both continuous assessment and examinations are used, the weighting of each in the overall subject grade shall be clearly stated in this document. Learning outcome should be assessed by continuous assessment and/or examination appropriately, in line with the outcome-based approach.

Continuous assessment may include tests, assignments, projects, laboratory work, field exercises, presentations and other forms of classroom participation. Continuous

Assessment assignments which involve group work should nevertheless include some individual components therein. The contribution made by each student in continuous assessment involving a group effort shall be determined and assessed separately, and this can result in different grades being awarded to students in the same group.

Assessment methods and parameters of subjects shall be determined by the subject offering Department.

At the beginning of each semester, the subject teacher should inform students of the details of the methods of assessments to be used, within the assessment framework as specified in the definitive programme document.

The University attaches great importance to academic integrity and honesty and upholds high standard in examination and in continuous assessment. In case of proven dishonesty including plagiarism, the penalty is detailed in Student Handbook section 11 on "Regulations and Rules".

15. PASSING A SUBJECT

In order to pass in a subject offered by the School/Departments in the Faculty of Business (i.e. subjects with prefix of AF/LGT/MM/FB), all students have to obtain Grade D or above in the subject.

16. ASSESSMENT OF DISSERTATION/PROJECT

16.1 General Regulations

The dissertation/project is equivalent to 9 and 6 credits respectively; and students must satisfy the appropriate pre-requisites before they can enrol in the dissertation/project.

The dissertation/project will include a "Research Methodology" class, normally before the start of dissertation/project. The normal period for completion is one academic year (two 13-week semesters and 7-week Summer Term). To ensure that students are suitably equipped before the dissertation/project is started, a minimum of 12 credits must have been achieved before registering for the dissertation/project. Students who are unable to pass the subject within the normal period would be deemed having failed the subject. The normal period for dissertation may be extended, subject to the approval of the Dissertation/Project Coordinator and based on the academic judgement of the likelihood of the student succeeding within the time granted for the extension, for a period of one semester every time. When permission is granted to extend the registration, the student will be required to pay a 3-credit course fee for each additional semester.

Break of study is normally not permitted once a student registers for dissertation/project and students are expected to pursue their dissertation/project in consecutive semesters. No re-assessment or retake of the failed dissertation/ project is allowed.

16.2 <u>Procedures for Preparing the Dissertation/Project</u>

Preparatory Phase – to identify a research topic area with matching Dissertation/Project Supervisor, and agree on the research goals and methodology, with plans and schedules, through literature search and active dialogue between student and Supervisor. Student will not proceed to the 2nd phase if the research proposal is not satisfactory.

Research Phase – this is the period for carrying out the actual research work. The student should meet with the Supervisor regularly for guidance and continuous assessment of the progress. When the Supervisor is satisfied that the research goals have been achieved the student can then proceed to the final phase.

Submission of the dissertation/project – this is the writing up of the work according to the standard format.

As a standalone compulsory component not directly assessed, there is a "Research Methodology" class that students taking the dissertation/project must attend, normally before the preparatory phase but can also be taken during the research phase. This taught component serves to introduce tools and techniques useful for doing research and writing up a dissertation/project.

16.3 Assessment of Dissertation/Project

The final project will be assessed by the Supervisor and a moderator. For student who opts for dissertation, an oral examination is also appraised by an Assessment Panel consisting of the Supervisor, the moderator and a 3rd panel member appointed by the Dissertation Coordinator.

The Dissertation Supervisor shall make arrangements on a mutually convenient time and place for an oral examination with presence of assessors after submission of THREE temporary bound copies of the dissertation.

17. GRADING

Assessment grades shall be awarded on a criterion referenced basis. A students' overall performance in a subject shall be graded as follows:

Grade	Grade Point for grades attained from 2020/21
A+	4.3
A	4.0
A-	3.7
B+	3.3
В	3.0
B-	2.7
C+	2.3
С	2.0
C-	1.7
D+	1.3
D	1.0
F	0.0

'F' is a subject failure grade, whilst all others ('D' to 'A+') are subject passing grades. No credit will be earned if a subject is failed.

At the end of each semester/term, a Grade Point Average (GPA) will be computed as follows, and based on the grade point of all the subjects:

$$GPA = \frac{\sum Subject Grade Point \times Subject Credit Value}{\sum_{n} Subject Credit Value}$$

where n = number of all subjects (inclusive of failed subjects) taken by the student up to and including the latest semester/term. For subjects which have been retaken, only the grade obtained in the final attempt will be included in the GPA calculation.

In addition, the following subjects will be excluded from the GPA calculation:

- (i) Exempted subjects
- (ii) Ungraded subjects
- (iii) Incomplete subjects
- (iv) Subjects for which credit transfer has been approved, but without any grade assigned
- (v) Subjects from which a student has been allowed to withdraw (i.e. those with the code 'W')

Subject which has been given an "S" code, i.e. absent from all assessment components, will be included in the GPA calculation and will be counted as "zero" grade point. GPA is thus the unweighted cumulative average calculated for a student, for all relevant subjects taken from the start of the programme to a

particular point of time. GPA is an indicator of overall performance, and ranges from 0.00 to 4.30 from 2020/21.

Any subject passed after the graduation requirement has been met or subjects taken on top of the prescribed credit requirements for award shall not be taken into account in the grade point calculation for award classification.

18. PROGRESSION AND DE-REGISTRATION

A student will normally have "progressing" status unless he / she falls within any one of the following categories, which shall be regarded as grounds for de-registration from the programme:

- (i) the student has reached the final year of the normal period of registration for that programme, as specified in the Programme Requirement Document, unless approval has been given for extension (applicable to students admitted in or after 2020/21); or
- (ii) the student has reached the maximum number of retakes allowed for a failed compulsory subject; or
- (iii) the student's GPA is lower than 1.70 for two consecutive semesters and his / her Semester GPA in the second semester is also below 1.70; or
- (iv) the student's GPA is lower than 1.70 for three consecutive semesters.

When a student falls within any of the categories as stipulated above, except for category (i) with approval for extension, the Board of Examiners shall deregister the student from the programme without exception.

Notwithstanding the above, the Board of Examiners will have the discretion to deregister students with extremely poor academic performance before the time frame specified in iii and iv above.

The progression of students to the following academic year will not be affected by the GPA obtained in the Summer Term, unless Summer Term study is mandatory for all students of the programme and constitutes a requirement for graduation and is so specified in the Programme Requirement Document.

19. ACADEMIC PROBATION

The academic probation system is implemented to give prior warning to students who need to make improvement in order to fulfil the GPA requirement of the University. If your GPA is below 1.70, , you will be put on academic probation in the following semester. If you are able to obtain a GPA of 1.70 or above by the end of the probation semester, the status of "academic probation" will be lifted. The status of "academic probation" will be reflected under the "Assessment Results" of eStudent. . However, this status will not be displayed in the transcript of studies.

To improve the academic performance of students on academic probation, students on academic probation are required to seek academic advice on study load and subjects to be taken. These students will normally be required to take a study load of not more than 15 credits. Students should, within one week of assessment results announcement, complete the Form 'Study Load for Students

on Academic Probation' (Form AR150) (AR Website > For Students on Taught Programmes > Application Forms) indicating the proposed study plans and meet with the Academic Advisors to finalise the subjects and number of credits to be taken in the semester following academic probation.

For application, get the form from:	Return it to:					
 AR Website > Students in Taught Programmes > Application Forms Academic Registry Service Centre 	 Programme offering department; Or Upload to eStudent > Academic Advising 					
Application period:						
Within one week of assessment results announcement.						

20. ELIGIBILITY FOR AWARD

A student would be eligible for the award of Master of Science in Operations Management if he/she satisfies all the conditions listed below:

- (i) Accumulation of the requisite number of credits for the award, as defined in this document.
- (ii) Satisfying the residential requirement for at least one-third of the credits normally required for the award, unless the professional bodies stipulate otherwise;
- (iii) satisfying all requirements as defined in the Programme Requirement Document and as specified by the University; and
- (iv) Having a GPA of 1.70 or above at the end of the programme.

A student is required to graduate as soon as he/she satisfies all the above conditions for award. Upon confirmation of the eligibility to graduate or leaving the University, registration for subjects (including the follow-on term of consecutive subjects) in the following semester/ Summer Term will be nullified and removed.

21. AWARD CLASSIFICATIONS

The following award classifications apply to your programme:

Award Classification	GPA
Distinction	3.60 - 4.30
Credit	3.00 - 3.59
Pass	1.70 - 2.99

The above ranges for different classifications are subject to Board of Examiners' individual discussion of marginal cases.

22. RECORDING OF DISCIPLINARY ACTIONS IN STUDENTS' RECORDS

- (i) With effect from Semester One of 2015/16, disciplinary actions against students' misconducts will be recorded in students' records.
- (ii) Students who are found guilty of academic dishonesty will be subject to the penalty of having the subject result concerned disqualified and be given a failure grade with a remark denoting 'Disqualification of result due to academic dishonesty'. The remark will be shown in the students' record as well as the assessment result notification and transcript of studies, until their leaving the University.
- (iii) Students who have committed disciplinary offences (covering both academic and non-academic related matters) will be put on 'disciplinary probation'. The status of 'disciplinary probation' will be shown in the students' record as well as the assessment result notification, transcript of studies and testimonial during the probation period, until their leaving the University. The disciplinary probation is normally one year unless otherwise decided by the Student Discipline Committee.
- (iv) Students who have committed academic dishonesty will be subject to the penalty of the lowering of award classification by one level. The minimum of downgraded overall result will be kept at a Pass.

The University reserves the right to withhold the issuance of an award parchment (or retract an award) or any certificate of study in case a student has unsettled matters with the University, or is subject to disciplinary action.

23. LATE ASSESSMENT

If you have been absent from an examination or are unable to complete all assessment components of a subject because of illness, injury or other unforeseeable reasons, you may apply for a late assessment. Application in writing should be made to the Head of Department offering the subject within five working days from the date of the examination, together with any supporting documents such as a medical certificate. Approval of applications for late assessment and the means for such late assessments shall be given by the Head of Department offering the subject or the Subject Teacher concerned, in consultation with the Programme Director.

In case you are permitted to take a late assessment, that examination or other forms of assessment will be regarded as a first assessment and the actual grade attained will be awarded.

24. ACADEMIC APPEALS

Subject Teachers, in respect of the subject they teach, have the sole responsibilities for marking and grading students' coursework and examinations scripts. Subject grades shall be reviewed and finalised by the Subject Assessment Review Panel (SARP) before being formally released to students and submitted to the Board of Examiners (BoE).

The BoE for each programme is responsible for making a decision on the student's classification of award and on cases such as de-registration or those with extenuating circumstances. It is therefore the responsibility of students to make known to Subject Teachers / SARP / BoE / other authorized parties of the

University, in advance and through the Department concerned, the factors which they believe have detrimentally and materially affected their assessment results.

i. <u>Grounds for Appeal</u>

The following may constitute grounds for a review of the decision:

a) if a candidate has evidence to support that his / her examination performance has been adversely affected by illness or other factors beyond his / her control which he / she was unable or, for valid reasons, unwilling to divulge before the Subject Teacher / SARP / BoE / other authorized parties of the University made their decision and of which they were unaware. The request from the candidate must be supported by medical certificates or other documentary evidence.

b) if there is evidence provided by a candidate or any other person that there has been a material administrative error, or that the examinations were not conducted in accordance with the current regulations for the programme or with the academic regulations of the University, or that there was any manifest inconsistency in marking between different classes of a given programme, or that some other material irregularities had occurred.

A student's disagreement with the marking or with the decision is not in itself an adequate ground for an appeal.

ii. <u>Procedures for Appeal</u>

a) Appeals against Decisions on Subject Results

Students appealing against the decision on their subject results shall pay a fee of HK\$125 per examination paper. Payment forms are obtainable from the Academic Registry Service Centre. Softcopies of the payment form can also be sent to students via email by their programme offering departments or the Academic Registry upon request. If more than one examination paper is involved, an extra fee of HK\$125 shall be charged for each additional paper. The fee shall be refunded if the appeal is successful / upheld.

A student should make his / her appeal in writing to his / her Head of Department within one calendar week upon the public announcement of his / her overall results, i.e. the date when the results are announced to students via the web. The Head of Department shall deal with the appeal if the student is studying in a department-based programme / scheme. If the student is studying in other types of programmes / schemes, the Head of Department shall refer the appeal to the following authorised person:

• the Programme Leader – for Faculty / School-hosted Undergraduate Programmes; or

• the Scheme Committee Chairman – for Postgraduate Schemes or Faculty / School-hosted Undergraduate Schemes.

The appeal should be accompanied by a copy of the fee receipt, for inspection by the Department concerned. The student should give a complete account of the grounds for the appeal in the letter, and provide any supporting evidence.

Departments should inform the student concerned of the appeal result within one calendar week after either the announcement of the student's overall result or receipt of the letter of appeal, whichever is later.

If the appellant is dissatisfied with the decision, he / she may then appeal in writing to the Registrar within one calendar week from the date of the Department's reply. He / She should provide the following information together with other relevant documents in support of the appeal:

- name in English and Chinese;
- student number;
- programme title, year and class of study;
- subject results appealing against; and
- grounds for appeal.

The Registrar shall then refer the case to the Academic Appeals Committee, which shall determine whether there are *prima facie* grounds for a reconsideration of the decision of the Subject Teacher / SARP concerned.

b) Appeals against Decisions on De-registration

Students appealing against the decisions on de-registration shall pay a fee of HK\$125. Payment forms are obtainable from the Academic Registry Service Centre. Softcopies of the payment form can also be sent to students via email by their programme offering departments or the Academic Registry upon request. The fee shall be refunded if the appeal is successful / upheld.

Students should complete and submit **Form AR149** "Appeal against the Decision of BoE on De-registration" to the General Office of the Department hosting the programme / award (or to the Faculty / School Office if the programme / award is hosted by the Faculty / School) within one calendar week upon the public announcement of the overall results, i.e. the date when the results are announced to students via the web. When submitting the form, the appellant has the responsibility to make known to the Academic Appeals Committee (AAC) full details and evidence that would support his / her appeal.

The appeal by the students will be considered by the Academic Appeals Committee, which will deliberate the appeal cases making reference to the recommendations of the programme-hosting Department / Faculty and the Faculty Dean / School Board Chairman.

c) Appeals against Decisions on Award Classification

Students appealing against the decisions on award classification shall pay a fee of HK\$125. Payment forms are obtainable from the Academic

Registry Service Centre. Softcopies of the payment form can also be sent to students via email by their programme offering departments or the Academic Registry upon request. The fee shall be refunded if the appeal is successful / upheld.

A student should make his / her appeal in writing to his / her Head of Department within one calendar week upon the public announcement of the overall results, i.e. the date when the results are announced to students via the web. He / She should provide the following information together with copies of the assessment result notification and other documentation in support of the appeal:

- (i) name in English and Chinese;
- (ii) student number;
- (iii) programme title, year and class of study; and
- (iv) grounds for appeal.

The Head of Department shall then refer the case to the Chairman of Academic Appeals Committee, who shall determine whether there are *prima facie* grounds for a reconsideration of the decision of BoE's and / or other authorized parties of the University.

iii. Decisions for Appeal

The decisions of the Academic Appeals Committee shall be final within the University.

25. PLAGIARISM AND BIBLIOGRAPHIC REFERENCING

The University and the LMS view plagiarism and copying of copyright materials, without the licence of the copyright owner, as a serious disciplinary offence. Students should comply with the University's policy on plagiarism in continuous assessment, bibliographic referencing and photocopying of copyright materials.

- (i) Plagiarism refers to the act of using the creative works of others (e.g. ideas, words, images or sound, etc) in one's own work without proper acknowledge of the sources.
- (ii) Students are required to submit their original work and avoid any possible suggestion of plagiarism in the work they submit for grading or credit.
- (iii) At the Faculty of Business, for any significant pieces of written assignments or essays in continuous assessment (i.e., counting 15% or more of total assessment) for a subject, students are required to submit their own assignment to *Turnitin*, a plagiarism prevention software built in Blackboard, and to generate an Originality Report. They are required to provide a copy of the Report when handing in their essay.
- (iv) The University/Faculty views plagiarism, whether committed intentionally or because of ignorance or negligence, as a serious disciplinary offence. Excuses such as "not knowing what is required" or "not knowing how to do it" will not be accepted.
- (v) Depending on the seriousness of the plagiarism cases, they may be referred to the Student Discipline Committee for investigation and decision. If a

student is found guilty of the alleged offence, penalties considered appropriate by the Committee may be imposed. These may include:

- suspension of studies for a specified period of time;
- expulsion for a specified period or indefinitely; and
- any other penalties as considered appropriate

26. PREVENTION OF BRIBERY ORDINANCE

PolyU staff members may in no circumstances solicit or accept an advantage. For relevant details, please refer to the Prevention of Bribery Ordinance (Chapter 201) of the Laws of Hong Kong at <u>http://www.legislation.gov.hk</u>.

27. COPYRIGHT AND USAGE OF ONLINE LEARNING MATERIALS

The learning and teaching platforms of The Hong Kong Polytechnic University ('PolyU") are for the use of PolyU students to facilitate their learning. The student shall use the platforms and the materials available (including teaching sessions conducted by staff of PolyU) for their personal study only. Where a student needs to download or save the materials available on the platforms for the permitted purposes, the student shall take all necessary measures to prevent their access by other parties. The materials are copyright protected. Save for the permitted purposes, no copying, distribution, transmission or publication of the materials in whole or in part in any form is permitted.

For details of all the regulations covered in this publication, please refer to the Student Handbook of the relevant year.

Subject Description Form

Subject Code	LGT5015			
Subject Title	Supply Chain Management			
Credit Value	3			
Level	5			
Normal Duration	1-semester			
Pre-requisite / Co-requisite/ Exclusion	Nil			
Objectives	 This course discusses the concepts, theory, models, tools, and the best practices of modern supply chain management (SCM) to help students: understand the strategic importance of SCM in improving a firm's competitive position in the marketplace with consideration of the fast-evolving economic, policy, and regulatory requirements for international trade and logistics; understand the key characteristics of successful supply chains and how they differ from the traditional approaches; gain insights into issues involved in the design, planning, and deployment of a supply chain; understand the design of international logistics networks and distribution strategies understand the impact of SCM principle on a firm's overall strategy, in particular, the impact on a firm's marketing strategy; understand the supply chain management development in the internet plus time; develop fundamental data science skills for analyzing and managing a supply chain in an organization. This subject contributes to the following Intended Learning Outcomes for the MSc programme(s): MSc/PgD in International logistics systems, operations and management, provide an insight and understanding of the concepts, theory of international logistics MSc/PgD in Global Supply Chain Management #1 Employ supply chain management (Learning objective 1a) #5 Practice business ethics 			

Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. evaluate the impact of supply chain and international logistics activities on the financial performance of a firm b. identify and assess the inter-actions of inventory, time, information, and financial factors in a supply chain context c. understand basic data science and modelling approaches for supply chain design, coordination and optimization d. recognize and understand the importance of the multi-organizational nature of supply chain management e. recognize and understand the importance of logistics network design and distribution strategies and the corresponding multi-modal transportation arrangements that are essential to contemporary shipping and logistics f. recognize and understand some key issues in supply chain management and the possible approaches that can be used to tackle these issues g. understand the ethical issues in the global supply chain management
Subject Synopsis/ Indicative Syllabus	 Logistics, supply chain, and competitive advantages The role of inventory in supply chains and basic methodologies for inventory management Uncertainty and risk, and how to deal with them through good inventory management approaches Value of information and information sharing in supply chains Distribution strategies Supply chain coordination and strategic alliance Procurement and outsourcing Supply chain integration Ethical issues in supply chain and logistics operations
Teaching/Learning Methodology	Lectures to introduce concepts, theories, management issues, and methodologies. Case studies and/or group projects: make connections of the contents from the lectures with real business practices so as to deepen the understanding of the concepts, theories, and issues of supply chain management. In-class exercises and take-home assignments: help students to grasp some of the key methodologies and tools; practice some basic analysis skills and access their understanding of some basic concepts and analysis skills.

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	LGT5033						
Subject Title	Lean Thinking and Practice						
Credit Value	3						
Level	5						
Normal Duration	1-semester						
Pre-requisite / Co-requisite/ Exclusion	Nil						
Objectives	 To provide students with a strategic overview of lean thinking philosophy and concepts. 						
	 To enable the students to critically review the principles of lean thinking. 						
	 To introduce students to the tools and techniques involved in identifying opportunities for 'leaning' operations and supply chain management activities in order to enhance competitive advantage. 						
	• To equip students the technics to manage lean data						
	 To employ entrepreneurial concepts as a strategy in lean thinking and practice 						
	 To prepare students to become entrepreneurs or management executives through practicing lean management 						
	This subject contributes to the following Intended Learning Outcomes for the MSc programme(s):						
	MSc in Operations Management						
	Develop the specific operations management knowledge						
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Able to employ lean thinking concepts as a strategy to eliminate waste and improve organizational performance. b. Able to apply lean concepts and tools to identify improvement areas and generate solutions in order to improve operational efficiency. c. Able to undertake an efficiency improvement project with lean thinking concepts and tools, and present the project proposal professionally. d. Able to perform lean data management e. Able to perform lean techniques and management in different industries 						
	f. Able to apply entrepreneurial concepts as a strategy in lean thinking and practice						

Subject Synopsis/ Indicative Syllabus	 Philosophy and evolution of lean thinking Lean principles: Value Value stream Flow Pull Perfection Lean techniques Value identification techniques Value stream mapping techniques Just-in-Time and Kanban systems Lean data Reliability and maintenance Big data management Entrepreneurial concept in leaning thinking Current issues in lean thinking

Subject Description Form

Subject Code	LGT5037					
Subject Title	Project Management					
Credit Value	3					
Level	5					
Normal Duration	1-semester					
Pre-requisite / Co- requisite/ Exclusion	Nil					
Objectives	To provide the students a comprehensive overview and the fundamental concepts of project management, and an understanding on how project management can be used as a strategic tool to deliver business performance for organizations.To provide the students key components of project management, and practical methodologies in managing projects of different natures.					
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Obtain the fundamental principles, concepts and techniques in project management. b. Understand modern project management trend and methods. c. Apply project management methodologies and techniques in enhancing business performance for organizations. d. Recognize issues in a realistic project scenario. e. Identify and use key performance metrics for measuring project success. 					
Subject Synopsis/ Indicative Syllabus	 Definition and characteristics of a project, project success criteria, project life cycle, project management trade-off, and corporate social responsibility in project management Project selection, and project portfolio evaluation Project defining, project budgeting, and Work Breakdown Structure (WBS) Project planning, project network, critical path method (CPM), and Gantt charts Resource management Risk management, PERT, and critical chain project management (CCPM) Cost and time management Project monitoring and control 					

	 Project closure Managing project team, stakeholder analysis, effective p communication, and ethical issues in project management 								
	 Project management software tools 								
Teaching/Learning Methodology	Lectures are designed to provide a basic grounding in principles, concepts and techniques in project management. Tutorials provide the environment and means for student-centered learning, in the form of class discussions, case analyses, problem exercises, simulation games, group project, and experience sharing.								
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						
			а	b	с	d	e		
	1.Continous assessment	50%	\checkmark	\checkmark	\checkmark	\checkmark	\checkmark		
	2. Final examination	50%		\checkmark	\checkmark	\checkmark	\checkmark		
	Total	100 %							
	 Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: Continuous assessment consists of course project and homework assignment, which can assess the students' understanding in theories, techniques and principles, evaluate their ability to apply project management methodologies/techniques and their ability to recognize and solve problems in real business environment. 								
	Final examination will assess the students' understanding in theories and principles, evaluate their ability to apply methods and techniques independently.

Subject Code	LGT5040
Subject Title	Supplier Development
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co- requisite/ Exclusion	Nil
Objectives	 To ensure students are able to understand the rationales and approaches on supplier development and how suppliers can be involved in helping themselves and their customers to compete effectively and generate new competitiveness in their long-term sustainable supply chain development. To provide comprehensive strategies, tools and emerging technologies for supplier development that are feasible for organizations to strengthen the capability of a sustainable supply base to meet current and future needs. To ensure that students are able to analyze and consider the attributes of supplier relationship options, identify their particular features, and determine what, when, why and how the chosen relationship can best be established and subsequently managed to achieve the desired business objective.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Realize the advantages and benefits of involving and developing suppliers through appropriate supplier development programs and projects to generate new competitive advantages in global supply chain management. b. Make use of the modern management tools and emerging technologies available to develop a supply base for meeting operations and strategic needs. c. Select the most appropriate suppliers under different settings, and to determine the necessary type and level of relationships to be developed aiming to accomplish with long term business goals in supply chain management. d. Assess the performance of suppliers and methods to improve suppliers' performance with an aim to identify improvement objectives and strategies in supplier development. e. Be attentive and responsive to ethical issues, Corporate, Social Responsibility (CSR) and Environment, Social and Governance (ESG) requirements in business through determining strategic options in

	supplier development to meet ethical and sustainable business requirements.
Subject Synopsis/ Indicative Syllabus	 Understand the needs and approaches to develop suppliers in pursuing a competitive global supply base to gain competitive advantage and operational sustainability. Examine the options, models, tools and techniques available for determining the size and structure of the supply base for each category of purchase and procurement requirement, identify potential suppliers, understand the strengths and weakness of suppliers, derive the criteria of ideal suppliers and determining the fit for purpose relationships and relational strategies. Understand corporate culture characteristics including ethics, and compliance on code of practices to build long term business relationship with harmony and mutual profitable growth including ESG between the buying firm and suppliers. Identifying the most appropriate short-term and long-term supplier development goals and strategies dependent upon whether the relationship is collaborative or arm's-length and the certainty of transactions. Adopt contemporary tools and emerging technologies such as but not limited to ebusiness, AI, big-data, information platform, analytics, digitalization and automation suitable and feasible to supplier development that encourage cooperation for mutual advantage and success in global supply chain management. Understand and be able to adopt quality management models, TQM systems and tools for continuous improvement and to put in place appropriate supplier rating and performance. Understand the approaches in sharing or transferring of knowledge in technological improvements and innovation in products and services development between the buying firm and the suppliers. Understand sustainability, risks analysis and mitigation, ethical issues and impacts in procurement and purchasing, and to consider suitable strategies to achieve sustainable and ethical objectives in supplier development planning and controls.
Teaching/Learning Methodology	Teaching Methodology adopted by Subject Lecturer: Lecturing in accordance with the syllabus, provide supporting reference materials, articles and journals with elaboration to trigger students' strategic thinking on related subjects; experience sharing by lecturer on successful and failure cases, comments on presentations, case discussions and tutorial on key topics and group project, and feedback on coursework performance.
	Learning Methodology adopted by students: Classroom learning, group discussion, library visit and searching for articles and journals, group project preparation and presentation, cross learning during classroom discussion, and in-class and off-the-class Q&A with lecturer etc.

Subject Code	LGT5073			
Subject Title	Risk Management in Operations			
Credit Value	3			
Level	5			
Normal Duration	One Semester			
Pre-requisite / Co- requisite/ Exclusion	None ISE548 Risk and Crisis Management			
Objectives	This subject seeks to develop the knowledge and analytical/practical skills necessary in organizations, with strong emphasis on operations management and quality management, for making risk management decisions to ensure business continuity through the application of the principles and practices of the full spectrum of entire risk management programme, covering risk management, business continuity (contingency) planning and crisis management.			
	This subject contributes to the following Intended Learning Outcomes for the following programme(s):			
	MSc in Operations Management			
	#2: Develop the specific operations management knowledge			
Intended Learning	Upon completion of the subject, students will be able to:			
Outcomes	a. Analyze the inherent risks in businesses and operations by applying the correct and basic principles and fundamental understanding of risk and risk management.			
	b. Comprehend the logical and sequential approach of risk management comprising identification, assessment (analysis and measurement), selection of risk management strategies, implement appropriate risk management solutions and actions, and finally measure and evaluate risk management performances.			
	c. Use the correct risk management concepts to devise appropriate strategies and tactics for risk management, business continuity (contingency) plans, and crisis management plan.			
	d. Be familiar with risk management in operations to a level that is adequate for continued self-enhancement of knowledge and practical applications of risk management, business continuity (contingency) planning and crisis management.			

	e. Explore and understand how emerging technologies (for examples, artificial intelligence, blockchain, cloud computing etc.) lead to emerging risks, crises and disruptive events that cause negative and positive impacts on business objectives, and how the emerging risks, crises and disruptive events are managed by risk management, business continuity (contingency) planning and crisis management respectively.
Subject Synopsis/ Indicative Syllabus	 Introduction and Understanding the Correct Principles and Concepts of Risks: origin of risk, definition of risk, elements of risk, risk and uncertainty, risk perception, risk exposure, risk response, classification of risk, sources of risk, causes of risk, typical organizational risks in businesses and operations, and supply chain risks. Fundamental of Risk Management: development of risk management, understanding of risk management, and enterprise of risk management, roles and responsibilities for risk management, and enterprise of risk management. Risk Management Process for Negative Risks: the logical and sequential steps of risk management process covering determination of risk management objectives (aligns with corporate objective), identification of all potential and inherent risks, assessment and evaluation of risks (including risk malaysis, risk measurement and the use of risk matrix), selection of risk management strategies, identification of risk factors and hazards) on the basis to determine the risk management actions), implementation of risk management actions, and finally the performance measurement of the effectiveness and efficiency of risk management programme to cover business continuity (contingency) planning and Crisis Management: the extension of the entire risk management programme to cover business continuity (contingency) planning and crisis management. Risk Culture: national culture and organizational culture, chain effect of culture, overview of organizational culture and risk atticude. Supply Chain Risk and Risk Management: fundamental of supply chain risks, overview and understanding of supply chain risk management, risk culture, and revisit of risk perception and risk atticude. Supply Chain Risk and Risk Management: fundamental of supply chain risk, overview and understanding of supply chain risk management, risk culture, blockchain, cloud computing etc.) Business continuity (contingency) planning and cris
Teaching/Learning Methodology	Lecture: Learn academic concepts and practical techniques/methods of the entire risk management programme aims at allowing students to acquire the correct understanding of the principles and concepts of risk and risk management, and then putting and applying the academic concepts and practical applications of risk management, business continuity (contingency) and crisis management approaches, techniques and methods into contexts. Coursework and final examination: Learn to practically apply risk management, business continuity (contingency) and crisis management approaches, techniques and methods, and to study selected topics in-depth.

Subject Code	LGT5101
Subject Title	Statistics for Management
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	 To introduce students to statistics as a tool for data preparation and analysis.
	• To impart on students the concepts, theories and techniques of a variety of statistical methods.
	 To develop students' ability and confidence in the use of statistics for preparing and analyzing data to support management decision making.
Intended Learning	Upon completion of the subject, students will be able to:
Outcomes	a. Able to use statistics for preparing and analyzing data to support management decision making
	b. Understand the concepts, theories and techniques of a variety of managerial statistics

Subject Synopsis/ Indicative Syllabus	Data Representation Frequency distribution; histogram; other graphical methods.
	Statistical Measures Measures of central tendency; measures of variability; measures of shape.
	Probability Concepts Sample space; simple and compound events; probability laws; random variables.
	Statistical Distributions Discrete distribution; Continuous distribution; Binomial, Normal and other distributions and their characteristics.
	Sampling Theory Sampling distributions; central limit theorem.
	Estimation Point and interval estimates; confidence intervals; significance level.
	Tests of Hypothesis Null and alternative hypotheses; sample size; type I and type II errors. Inference about a population; Inference about comparing two populations; T-test.
	Analysis of Variance
	One-way analysis of variance
	Linear Regression and Correlation Least squares method; coefficient of correlation.
	Multiple Regression Applications of multiple regression equation; inferences about parameters.
Teaching/Learning Methodology	Concepts and techniques will be introduced through lectures. Students are required to apply the knowledge and skills to solve various applied statistical problems in the form of exercise and case study. The use of relevant software such as Excel, STATA, and Python will be introduced and encouraged.

Subject Title	Managing Operations Systems						
Credit Value	3						
Level	5						
Normal Duration	1-semester						
Pre-requisite / Co-requisite/ Exclusion	Nil						
Objectives	This subject introduces both philosophy and techniques of operations management to students. The course content is designed to help students understand basic concepts, learn about basic tools in operations management, understand the rationale behind the scientific methods used in daily management, and gain insights into designing and managing operations systems in practice.						
	This subject contributes to the following Intended Learning Outcomes for the following programme(s):						
	MSc/PgD in Global Supply Chain Management #2 Build up operations and logistics concepts #5 Practise business ethics						
	MSc in Operations Management #1 Solve business problems #3 Practise business ethics						
Intended Learning Outcomes	Upon completion of the subject, students will be able to:						
	 (a) understand the terminology and basic concepts of operations management (b) understand some basic data science and modelling approaches for 						
	 (b) understand some basic data science and modelling approaches for operations management (c) build basic quantitative models that can be used for decision-making in operations management; be aware of the assumptions and limitations of the models 						
	 (d) apply these models to solve practical management issues and develop critical and creative thinking in analyzing and solving real-life problems (e) beware of ethical issues in business 						

Subject Synopsis/ Indicative Syllabus	Introduction to Operations System Concepts, the operations functions and its relation with other business functions, particularly, the strategic importance of operations management.
	Business Process Design and Reengineering Process concepts; process design methods; process effectiveness and efficiency; business process reengineering.
	Forecasting Objective of forecasting; logic of forecasting; qualitative and quantitative methods for forecasting; measurement and monitoring of forecasting systems; use of machine learning techniques in forecasting.
	Capacity Planning Strategic capacity planning; equipment management; concept of total cost of ownership; volume analysis; breakeven models; decision tree analysis.
	Service Processes and Queueing Systems Characteristics of service processes, service system design, examples of queueing systems; performance measures; single/multiple servers models; priority rules; economic analysis.
	Inventory Management Functions and costs of inventory management; ABC analysis; economic ordering quantity model; vendor managed inventory system; inventory replenishment systems.
	Quality Management, Quality Control, Just-in-Time and Lean Operations Total quality management; quality measurement; quality cost; quality inspection; statistical quality control; Philosophy and concept of JIT systems; pull versus push production systems; lean operations.
	Supply Chain Management Concept of supply chain management; information coordination; cost and benefit of postponement; quick response; worldwide sourcing.
	Project Management Project and its working team; project break down; Gantt charts; project time and cost; critical tasks in projects, critical path method.
	Sustainable and Socially Responsible Operations Ethical issues in operation management; codes of ethics; worker safety; product safety; the environment and quality; employees' rights; closing facilities; socially responsible operations.
	Data-driven Operations Management Introduction of big data concepts and applications, data-driven operational decision-making, artificial intelligence and machine learning.
	Industry 4.0 and Sharing Economy Industry 4.0; new technologies including Blockchain in operations management; features of various sharing business models; the opportunities and challenges in these new models.

Teaching/Learning Methodology	Lectures are designed to provide a basic grounding in principles, techniques in operations management. Tutorials provide the envi means for student-centered learning, in the form of class discussi analysis, classwork exercises, and experience sharing. Students are required to apply the knowledge and skills to analys various realistic operations management problems in assignment and exams.							ent and ase solve

Normal Duration	One Semester
Exclusion	ITC575 Principles of Total Quality Management
Objectives	The purpose of this subject is to develop hands-on knowledge and practical skills that are required to formulate, deploy, manage, and implement any quality improvement projects, whether in manufacturing, service, or any other business opportunities. The core principles of quality management starts by taking (1) a customer focus and orientation, (2) management concepts for continuous improvement, and (3) employee involvement and participation with the quality management framework (the trilogy covering quality management infrastructure, quality management practices, and quality management tools and techniques. Quality management adopts an objective and data-driven approach through the extensive use of (4) analytical techniques including statistical and problem – identifying, studying, and analyzing the problems to propose optimal and practical solutions to the problems in (5) a clear quality improvement roadmap to implement the quality management actions.
	Our goal is to explain and provide the relevant and practical quality management infrastructure, practices, and tools and techniques into how these aspects can be collectively and successfully applied in managing quality of business organization to ultimately satisfy its customers (coveting internal customers, external customers (consumers/end-users), and the society). Lecturer is advised to use a mixture of lectures and in-class exercises/discussions to develop a richer understanding and application of the materials.
	Specifically, students are able to learn and master the following:
	 The core principles and precise understanding of Quality and Quality Management (QM). The QM Framework and its major elements. Advocates of Quality Gurus pathing the development, evolution, and contemporary development of QM. The main and ultimate purpose of QM – The deployment of Voice of Customer The implementation of QM in action for quality improvement projects/ activities.
	The major tools and techniques for QM application.The Business Excellence Models of QM.

	• The latest development of QM in Quality 4.0 stemming from Industry 4.0 and emerging digital technologies in QM.
	This subject contributes to the following Intended Learning Outcomes for the following programme(s):
	MSc in Operations Management
	#2: Develop the specific operations management knowledge
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. apply QM framework (the trilogy covering quality management infrastructure, quality management practices, and quality management tools and techniques) to assess and improve operational efficiency, business process, and organizational performance, b. practice QM to improve customer satisfaction, employee involvement and participation, and continuous improvement for sustaining the attainment of corporate, strategic, and operational objectives and goals, and
	c. adopt QM as a strategy and tactic to achieve business excellence.
Subject Synopsis/ Indicative Syllabus	This subject covers the following topics/areas of quality management:
	 Principle of Product and Service Quality
	Principle of Quality Management
	Quality Management Guru's principles and advocates
	 Voice of Customer Outline Management Francescult (the trill and entrying anality management)
	 Quality Management Framework (the trilogy covering quality management infrastructure, quality management practice, and quality management tools and techniques)
	The Business Excellence Models
	The classical Quality Management Tools and Techniques
	 Contemporary Issues of Quality Management

Teaching/Learnin	Contact hours: 39 hours for lectures							
g Methodology	Salient concepts and key issues based on the literature and practice will be introduced, explained, and discussed with the students through lectures.							
	Case studies will also be used to illustrate various pra applications of QM in real-world business and commercial con and to stimulate discussions leading to context-specific knowled Students are required to apply the knowledge to analyze and re the relevant contemporary issues in the field.

Level	5					
Normal Duration	1-semester					
Pre-requisite / Co-requisite/ Exclusion	Nil					
Objectives	This subject examines the impact of the international political, economic, monetary and culturalroles on the functions of operations management. For the operational aspects, special emphasis will be made on the orchestration of the business operational activities in a global value-chain for sustaining competitiveness.					
	This subject contributes to the following Intended Learning Outcomes for th MSc programme(s):					
	MSc/PgD in Global Supply Chain Management					
	2 Build up operations and logistics concepts					
	MSc in Operations Management #1: Solve business problems					
Intended Learning	Upon completion of the subject, students will be able to:					
Outcomes	a. Properly understand the operations management issues in business internationalization as well as global value-chain for sustaining competitiveness.					
	b. Understand the applications and implications of technologies in the international business environment					
	c. Demonstrate how to solve business management issues by appropriately applying operations management theory and method to improve operations competitiveness in a global business environment.					
	d. Understand how to adjust the product global supply chain management according to different regional business environments					
	e. Correctly identify the operations issues when conducting production or providing service in different countries

Subject Code	LGT5111					
Subject Title	Practice of Operations Management					
Credit Value	3					
Level	5					
Normal Duration	1-semester					
Pre-requisite	All foundation and core subjects for the student's award.					
Exclusion	MGT519/LGT5205 OM Dissertation					
Objectives	This is essentially a project-based subject. The objectives are to enable students to:					
	 a. bring together skills and knowledge acquired through the taught subjects and to apply them in analysing a real management problem; b. develop their skills in information specification, gathering, analysis, and interpretation in the context of a problem-solving project; and c. develop their project management and presentation/writing skills in conducting the project and preparing a final project report. 					
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: Carry out a management research project independently; Select and apply appropriate OM principles and techniques to improve the operational performance of an organization; Apply basic research methods. 					
Subject Synopsis/ Indicative Syllabus	Students work individually on a project topic within the area of OM assigned or approved by the subject leader. The subject leader will be responsible for allocating supervisors for individual students. The supervisor, who is a member of academic staff, will provide students under his/her supervision with guidance on topic, reading, methodology and project management. Where necessary, other academic staff may be called upon to provide technical guidance on particular areas of literature. The supervisor will monitor progress through regular progress meetings.					
	Students must submit the following for assessment: Project proposal – submitted in week 5. The proposal should constitute a firm plan of work and should clearly identify the problem or issue to be investigated, along with a clear methodology for the project. The subject leader must be satisfied that the project is within the scope of the award and that the proposal has a clear management problem-solving focus.					

	 Project report – submitter should normally be not in 10,000 words for a group Project reports will be as Does the report studied? Subject Title	Applications of Decision Making Models
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co- requisite / Exclusion	Preferably with knowledge of LGT5102 "Models for Decision Making", yet without it will not be a problem.
Role and Purposes	1. To impart on students the skills in applying the concepts, theories and techniques of a variety of management science methods.
	2. To develop students' ability and confidence in solving management decision problems, particularly paying attention to the practical considerations.
Intedned Learning Outcomes	 Upon completion of the subject, students will be able to: a. Understand the range of practical application of management decision analysis techniques, the characteristics of successful application, and the limitations of the techniques. b. Develop skills in analyzing complex operations problems, using quantitative techniques as appropriate.
	c. Tackle a management decision situation from different angles of view, hence develop the creative thinking and be more critical to evaluate the outcomes of different decisions.
Subject Synopsis/ Indicative Syllabus	Decision scope: find out a clear scope of decision required. How to evaluate different decisions: identify the objectives; there may be conflicting objectives. Model the situation: search for appropriate analytical or heuristic methods to solve the problem; understand the limitations of each method. Analysis of results: cost and benefits analysis; sensitivity analysis.
Teaching/Learning Methodology	 Mainly through small group discussions. Students will be guided throughout the discussion process, particularly addressing on the following issues: 1. How to start to tackle a complicated situation? 2. How to understand the data given and link up the relationship among data? 3. Point out mistakes when applying different methods. 4. How to apply what they have learnt in other subjects to a real situation?

Subject Code	LGT5133
Subject Title	Strategies and Technologies in Warehousing Management
Credit Value	3
Level	5
Normal Duration	1-semester
Exclusion	ISE512 Warehousing and Material Handling Systems LGT5131 Warehousing and Materials Management
Objectives	To provide students with the strategies and technologies necessary for the design and management of warehousing, materials handling systems, and inventory control. In particular, this subject emphasizes the applications and implications of the latest technologies in logistics and supply chain management in warehousing, the handling of products, and control of inventories. On completion students will be able to both analyze existing systems and recommend improvement solutions.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Design and manage warehousing, material handling and inventory control systems. b. Improve existing warehousing, material handling and inventory control systems. c. Apply the latest technologies and understand their implications in the relevant design, management, and improvement activities.
Subject Synopsis/ Indicative Syllabus	 Introduction to warehousing management and strategies Warehouse location, layout and design: Qualitative and quantitative techniques Materials handling systems: Technologies, equipment, and packaging Warehousing management systems and the relevant IT applications Warehouse quality management Warehouse performance management, measurement, and databases Warehouse safety and security 3PL and warehousing management Advanced technologies: AI, analytics for warehousing decisions, warehousing automation, blockchain applications in materials management, etc. Inventory management and control: Tools, methods, and strategies
Teaching/Learning Methodology	Concepts, theories and key issues will be introduced to students in lectures. Case studies will be used to illustrate some application aspects and to stimulate discussions leading to context-specific knowledge. Students are required to apply the knowledge to analyze some contemporary issues.

Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	Intended subject learning outcomes to be assessed (Please tick as appropriate)

	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:							
	The achievement of the learning outcomes will be dependent on students' knowledge in conceptual theories and ability to apply certain quantitative techniques.							
	Since examination is effective in assessing the knowledge level in conceptual theories and continuous assessment (including assignments and projects) is effective in assessing the ability in applying techniques, both methods will be needed to assess the outcomes of this subject.							
Student Study Effort	Class contact:

Subject Code	LGT5153
Subject Title	Practice of Quality Management
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisites	LGT5157 Six Sigma and Quality Management Techniques <i>or</i> LGT5158 Statistical Quality Control for Manufacturing and Service <i>or</i> LGT5159 Implementation and Auditing of Quality Management Systems <i>or</i> MM511 Managing Organizations and People
Exclusions	LGT5213 QM Dissertation
Objectives	This subject is a small-scale research project and requires students to work individually, for a systematic investigation of some quality management issues in a company or industry. Students have to professionally report their results through a written report and an oral presentation.
Intended Learning	Upon completion of the subject, students will be able to:
Outcomes	 a. Design a project proposal for the study of a practical application topic in quality management. b. Collect and analyse data and information for a systematic investigation of the topic. c. Present the findings of the project in a logical and orderly manner.
Subject Synansis/	Proposal
Subject Synopsis/ Indicative Syllabus	Students have to submit a project proposal which should include: title of the project, statement of problems, brief literature review, study framework, methods of investigation and project schedule. The proposals have to be approved by the subject lecturer.
	Progress
	Students have to manage the progress of their projects; they have to meet the subject lecturer regularly in order to report the progress and obtain feedbacks.
	<u>Report</u>
	The project reports should be in about 5,000 words, excluding references and appendices. They should be written in a logical and orderly manner. Students have to orally present the major findings and conclusion of their projects in class.

Teaching/Learning Methodology	10	hally. They have to submit project plans nd monitor the progress of their projects ct lecturer.
Assessment Methods in Alignment with Intended Learning Outcomes		
	intended learning outcomes: It is small-scale research project where s management knowledge in addressing th There are three stages of the continuou are required to design and defend a proje analyse data and information for a syst	he assessment methods in assessing the tudents need to demonstrate their quality the identified issues of their selected topic. Is assessment. In the first stage, students text proposal. They progress to collect and tematic investigation of the topic at the cturer. In the final stage, students need to easoned, logical, and orderly manner.

Pre-requisite Exclusion	Nil
Objectives	 To provide students with a focused and systematic approach to use and apply Six Sigma and other operational and quality management techniques and methodologies to meet the aims and objectives of total quality management; To develop students with ability to apply Six Sigma techniques to define, measure and analyze problems in improving quality at the workplaces; and
	3 To develop students with ability to identify the opportunities for improvement in business, operations, manufacturing, and servicing environments through applying Six Sigma, Kaizen and other continuous improvement techniques and methodologies.
	This subject contributes to the following Intended Learning Outcomes for the following programme(s):
	MSc in Operations Management
	#2: Develop the specific operations management knowledge
Intended Learning Outcomes	Upon completion of the subject, students will be able to:
	a. Apply Six Sigma, total quality management techniques and other relevant continuous improvement methodologies to tackle, analyse and resolve problems in improving quality and quality management with particular reference to the workplaces;
	b. Develop the ability to adopt new techniques and methodologies to synthesise new knowledge in quality management and continuous improvement;
	c. Analyse the basic business and operational data using total quality management techniques and methodologies, especially in the case of Six Sigma, in a systematic way;
	d. Cooperate efficiently and effectively in a team to apply total quality management tools, techniques, and methodologies to accomplish and attain pre-determined objectives and goals in quality management;

	 e. Identify the opportunities for improvement in business, operations, manufacturing, and servicing environments through applying Six Sigma, Kaizen and other continuous improvement techniques and methodologies to achieve breakthrough and/or continuous improvements in these areas; and f. Explore and understand the impacts of emerging techniques (for examples, artificial intelligence, blockchain, cloud computing, entrepreneurship etc.) on quality management, and how these emerging technologies are relating to improvement projects of Six Sigma and total quality management techniques and methodologies.
	[Note: Students completed and passed this subject are eligible to apply for the professional qualification of Registered Six Sigma Green Belt (RSSGB) with Six Sigma Institute (Hong Kong) and China Association for Quality under their mutual recognition.]
Subject Synopsis/ Indicative Syllabus	<u>Fundamental Concept and Application – The Foundation and Fundamental of Quality</u> <u>Management</u>
	 Product and Service Quality Quality Management and Quality Management Framework (the trilogy covering quality management infrastructure, quality management practices, and quality management tools and techniques) Cost of Quality Concept – the correct and precise understanding of the cost of quality and its implications Kaizen – Continuous Improvement for Sustainable Success (the basic premise and purpose of Lean Manufacturing/Management to eliminate waste (muda) and non-value-added activities) Voice of Customer – Relentlessly Customer-Focused by Quality Management (identification of the critical-to-quality as the basis to identify and develop process improvement project of Six Sigma) Six Sigma Methodology – The Business Framework for Close to Perfect Explanation, motivation, rationale, development, and understanding of Six Sigma (the basic for reduction in defect and process improvement project) Structure and responsibilities of the martial art structure of the Six Sigma project team Preparation and critical success factors of implementing Six Sigma DMAIC methodology and its unique features and techniques Basic statistical tools for Six Sigma Quality Management Tools and Techniques of Quality Management and Six Sigma – The Need for Performance Measurement System by Statistical Analysis and Teamwork The classical tools for quality management and Six Sigma SIPOC and Process Mapping Process capability calculation Statistical process control and control chart Emerging Technologies and Quality Management Techniques

	Contemporary issues and qu stemming from Industry 4.0		gital tec	molog	jies.			
Teaching/Learning Methodology	Lectures will adopt a systematic approach focusing on the use of different quality management tools, techniques, and methodologies, such as Six Sigma methodology. Students are expected to present their evaluation and analysis of case studies and other related project assignments during the individual assignment and group presentation assignment.					gy. other

Subject Code	LGT5158
Subject Title	Statistical Quality Control for Manufacturing and Service
Credit Value	3
Level	5
Normal Duration	One Semester
Exclusion	ITC501 Industrial Quality Control
Objectives	 To develop students with a practitioner-oriented statistical thinking for quality management in both manufacturing and service industries; To provide students with the methodology of establishing and managing an effective SPC program in manufacturing and service organizations;
	 3 To help students improve the performance of operations process consistently and predictably over time. This subject contributes to the following Intended Learning Outcomes for the following programme(s): MSc in Operations Management #2: Develop the specific operations management knowledge
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Understand the role of statistics in quality management; b. Design and manage SPC in both manufacturing and service sectors; c. Understand the concept of acceptance sampling and be familiar with different sampling plans; d. Make use of statistical methods and tools to improve process quality.
Subject Synopsis/ Indicative Syllabus	Fundamental ConceptSpecifications and tolerances; the gap model of service quality; process variation; foundations of statistical concepts in quality control and management; quality and data characteristics; sampling distribution and statistical inference.Management of process variation Deming circle, SPC strategy analyzing, and framework for monitoring controlling, and improving process performance; key quality characteristics to identify and measure in production and service industries; principles of SPC implementation.Statistical process control Univariate and multivariate control charts; short run SPC; process capacity analysis; control charts for non-manufacturing applications.Acceptance sampling Operating curve; lot-by-lot attribute sampling plans; characteristic continuous sampling plan; sampling plans for variables.Information technology (IT) and software applications

	Intelligence, Blockchain, C impact on quality managem		Data scie	ence and	Entrepre	neurship	and their	
Teaching/Learning Methodology	This subject develops knowledge in students for managing process variations in both manufacturing and service industries. Theories and case studies are provided in the lectures to illustrate the concepts and applications of statistical process control (SPC) and acceptance sampling plan. This course adopts Deming's PDCA continuous improvement cycle principles to implement SPC for quality control and enhancement. Simulation of an actual business environment is used to demonstrate challenges in executing SPC by role playing and to strengthen students' management skills in applying related theories and tools in the real world.

Subject Code	LGT5159
Subject Title	Implementation and Auditing of Quality Management Systems
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/Co- requisite/ Exclusion	ISE509 Auditing & Registration of Quality Systems
Objectives	The course introduces students to the principles and techniques of implementing and auditing several popular management systems with respect to concerns on compliance and organizations' improvement needs.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to a. understand the principles and requirements of management systems including ISO 9000, ISO 14000 and ISO 45000. b. understand the auditing and management review techniques to identify the nonconformities of different systems. c. understand the implementation strategy and methods of new quality management systems.
Subject Synopsis/ Indicative Syllabus	 Integrated Management Systems Principle of management systems, process and plan-do-check-act cycle. ISO 9000 Standard Approaches to quality management; ISO 9000 series of standards, structure, and basic concepts; process approach; its relationship with TQM. ISO 14000 Standard Principles of ISO 14001; preparatory environmental review, environmental policy, planning, implementation and operation; checking and corrective actions; management review. ISO 45000 Standards Principles of ISO 45001; OH&S management system model; OH&S policy; planning, implementation and operation, management reviews. Risk-based Thinking Principles, methods and tools of ISO 31000; risk assessment and management in quality, environment, and occupational health and safety.

	ISO 19011 Standards Management System Audits Principles of auditing; managing an audit program; performing an audit; competence and evaluation of auditors.							
	Certification of Management systems ISO 17021-1 Conformity assessment requirements; Principles of certification/registration; certification process; post certification obligations; typical problems and factors of successful certification and continuous implementation.							
Teaching/Learning Methodology	Professional seminars consultants, or QM pra to apply the knowled	Concepts and techniques will be introduced through lectures. Professional seminars featuring guest speakers from registration bodies, consultants, or QM practitioners will be organized. Students are required to apply the knowledge and skills to solve the implementation and auditing problems in the form of case studies or exercises.

Subject Code	LGT5202
Subject Title	Project
Credit Value	6
Level	5
Normal Duration	1 academic year (two 13-week semesters and one 7-week summer term)*
Exclusion	LGT5201 Dissertation LGT5111 Practice of Operations Management LGT5153 Practice of Quality Management LGT5205 OM Dissertation LGT5211 GSCM Project LGT5215 Practice of Global Supply Chain Management
Objectives	 To create an opportunity for the application of concepts and techniques acquired during the taught programme, in a management practitioner environment, in order to complete the formal learning experience, and to be of use to the sponsor. Concepts and techniques: To provide a testing ground for concepts presented in the taught programme. To serve as a basis for developing new concepts not covered in the literature. Management practitioner environment: Individual students or groups are involved in the development of a practical solution to a business problem provided by the sponsor; or based on a realistic case study. To provide the opportunity to identify and explore aspects of the practice of logistics, operations management, quality management and/or supply chain management in specific organisational contexts. To relate the above to the knowledge and perspectives acquired during the course programme. Personal learning experience: To develop and test the students' ability to produce a coherent and extended account on a topic of considerable conceptual content.

Intended Learning	Upon completion of the s	ubiect studen	ts will	he ahle	to			
Outcomes	a. Identify a research problem in real world and write research proposals.							s.
	b. Conduct literature review on issues related to the problem areas.							
	c. Apply appropriate research methodology in data collection, analysis and interpretation research findings.							
	d. Deduce the solutions the limitations.	-	ed prob	lems so	cientifi	cally a	nd und	erstand
	e. Communicate the rese	earch results e	effective	ely.				
Subject Synopsis/ Indicative Syllabus	Why do research? What is good research? Scientific thinking – styles of thinking, the thought process, the scientific attitude; What makes an investigation scientific? What can empirical research do? The necessity of knowing the purpose of research; The ethics of research; Qualitative and quantitative approaches; Variable, Parameter, Assumption, Theory, Model, Hypothesis, Ideal causal-study design; Case-study descriptive research; Classification research; Measurement and estimation; Comparison; Research trying to find relationships; Investigating cause and effect; Mapping structures; Evaluation research; Questionnaire design; Interview; Survey; Sampling methods; Some principles of measurement – reliability and validity; Data analysis and interpretation; Writing Scientific Reports: Research report components and structure; Presentation of statistics; Plagiarism.							
Teaching/Learning Methodology	Guided study programme on research methodology equivalent to 1 credit value. Student-centred activities in the form of investigational/research work, literature review, data collection, data analysis and interpretation according to the requirements specified in the Guidelines for Project (LGT5202). The effort of these activities should be equivalent to 5 credit values.							
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					nes to

	Total	100 %						

	[This new % weighting will be effective for students newly registered on this subject starting from Semester 1 of 2020/21.]					
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:					
	In order to have objective and comprehensive assessment on the student's research work in the form of project work, the Final Project Report will be assessed by the supervisor and by a moderator who is appointed by the Project Co-ordinator. The reflective report will be assessed by the supervisor, in which the student is expected to explain the research methodologies learnt through the lectures and seminars on research methodologies. The assessment criteria are set out in the Guidelines for Project (LGT5202).					
	Finally, all these marks are combined and the final grade LGT5202 Project is to be determined by the Project Co-c the assessment weighting set out in the Guidelines for Pro-	ordinator according to

Subject Code	LGT 5425
Subject Title	Business Analytics
Credit Value	3
Level	5
Normal Duration	One Semester
Pre-requisite/ Co- requisite/ Exclusion	Nil
Objectives	This subject introduces the business analytical techniques by enabling students to understand business theories and frameworks. Through equipping students with a solid understanding and critical thinking mindset of business analytics, students can apply business intelligence tools to effectively address various issues faced by organizations, as well as be aware of the possible challenges and ethical issues related to business analytics. This subject contributes to the following Intended Learning Outcomes for the following programme(s): MSc in Operations Management #2: Develop the specific operations management knowledge
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. identify and translate real-world business and operational problems into business analytics problems; b. implement efficient business analytics strategies to solve business and operational problems; c. understand, compare and contrast different business analytics techniques d. identify, evaluate, and capture business analytic opportunities that create values e. understand the current trend of business analytics and be aware of the ethical issues related to business analytics
Subject Synopsis/ Indicative Syllabus	Foundations of Business Analytics Introduction to business analytics Descriptive Analytics Statistical measures, estimation, statistical inference, hypothesis testing. Predictive Analytics Introduction to predictive modeling. Regression analysis, logistics analysis, introduction to data mining, text analytics. Prescriptive Analytics Decision analysis, linear and integer programming, simulation and the applications. Note: Emerging technologies, e.g., Data Mining and Data Science, and their applications in Business Analytics have been included in the above.
Teaching/Learning Methodology	There will be a mix of lectures, discussions, and case studies. Mini-group discussion and projects will be carried out on some business cases in depth and reports are produced at the end of the term. Hands-on experiences of using business analytics tools will enhance students' understanding of the theories and concepts of Business Analytics.

Subject Code	LGT5426
Subject Title	Managing Innovation
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	This subject addresses selected challenges and opportunities related to managing business innovation. It intends to discuss concepts, theorems, and tools to help students develop skills and insights for designing, evaluating, and managing business innovation. Moreover, the subject also plans to introduce various kinds of latest innovations in product, technology, operations process, and business models. The subject not only provides students with general understanding on effective management of innovation, but also provides rich practical examples to reflect the latest innovative advances, with special focus on the ones that have wide applications in supply chain and logistics related industries. This subject contributes to the following Intended Learning Outcomes for the MSc programme(s): MSc in Operations Management #1: Solve business problems
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: h. understand the strategic role of innovation in organization, industry, and global market; i. understand the technological, human, economic, organizational, social, ethical, and other dimensions of innovation; j. learn and apply concepts, theorems, and tools to develop critical and analytical reasoning about business innovation in and beyond organizations; k. introduce various latest innovative advances in the areas of supply chain and logistics industries, including AI, Blockchain, Cloud Computing, Data Science, etc.

Subject Synopsis/ Indicative Syllabus	 Key issues in managing innovation: concept of innovation, innovation and competitive advantage, source of innovation, framework of an innovative strategy, organizational issues of innovation, innovation in a competitive environment, effective implementation of innovation, social and ethical issues regarding innovation. Innovation under uncertainty: Innovative project measurement and selection, portfolio management, resource allocation, innovation execution under uncertainty, the theory of disruptive innovation, risk management. Product and technology innovation, e.g., AI, 3D printing, last-mile delivery, autonomous vehicles, blockchain technology, information security, green technology, big data analytics, etc. Operation process innovation, e.g., pooling and postponement, Toyota production system, fast pass waiting line management, etc. Business model innovation, e.g., omni-channel retailing, sharing economy, crowdfunding, crowdsourcing, innovative supply chain financing, etc. 							c of an ion in a n, social ent and ovation on, risk ast-mile rmation Toyota sharing chain

Subject Code	AF5108
Subject Title	Accounting for Managers
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co- requisite/ Exclusion	None
Role and Purposes	This course introduces the fundamental concepts and analytical techniques on financial and managerial accounting. It contributes to the achievement by improving students' understanding on basic concepts on company's financial and managerial accounting information. Students will learn how economic transactions are recorded in accounting system and compiled into various financial statements, and students will also learn how relevant cost accounting information can be utilized in budgeting, controlling and performance evaluation. Students are expected to be able to understand the financial information provided by accounting system and apply both financial and managerial accounting information to analyze company's financial positions in a critical manner; students should also gain some preliminary insights into how entrepreneurs bring private firms into public markets through initial public offerings. Students will be able to gather both financial information and capital market information on listed companies to issue stock recommendations. They have to communicate reasoned arguments effectively, both in speech and in writing.
	MSc in Operations Management
	#1: Solve business problems
Subject Learning	Upon completion of the subject, students will be able to:
Outcomes	Financial Accounting (FA)
	a. Understand the accounting system of an organization (both profit making and non-profit making).
	b. Record accounting information properly and communicate with accounting information effectively.
	c. Understand the basic concepts and principles underlying the financial statements, and be able to interpret financial statements, including balance sheet, income statement and cash flow statement.
	d. Identify the characteristics of good corporate governance and apply the knowledge in analyzing the potential governance problems.

	Managerial Accounting	g (MA)					
	a. Be familiar with various managerial accounting techniques such as CVP, contribution margin concepts, relevant costing, etc.						
	b. Utilize manageri and performance		information in bud	geting, controlling			
			counting information

Subject Code	MM501
Subject Title	Research Methods
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite / Co-requisite / Exclusion	Research and Consultancy Techniques for CRE (BRE501) and Business Research Methods (MM5011) and Marketing Research (MM586)
Objectives	This subject provides students with an opportunity to learn about the use of scientific research as a problem solving tool, and enables them to equip with the adequate knowledge and practical skills that are often required to conduct independent research in business and management fields. Specifically, this subject enables students:
	 To understand the processes of research in the management and operation of the public and private sectors, and the various approaches that are used in that research; To critically review published material and other research and consultancy reports; To equip with the necessary skills required to undertake a substantial supervised research project at a Master's degree level; To experience the process of preparing a properly constructed proposal for a research project.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. appreciate different research paradigms; b. formulate theoretically grounded research questions; c. exhibit skills essential to the planning and conduct of rigorous research; d. demonstrate familiarity with the concepts of validity and reliability in research; e. design appropriate sampling strategies, as well as collect, analyze and interpret data in diverse research settings; f. demonstrate a systematic understanding of the range of advanced and latest research techniques, be able to critically evaluate these techniques and apply them appropriately; g. appraise the ethical implications of implementing research and demonstrate the ability i. to communicate research findings effectively, both orally and in written form, to the business research and practitioner communities.
Subject Synopsis/ Indicative Syllabus	Introduction to Research Overview of management research: basic, applied and action research. Exploratory, descriptive and causal research. Evaluations studies.
	Basic research paradigms: positivism and the scientific method;

	phenomenology and qualitative methodologies.
	<u>The Research Process</u> The research process. The research proposal.
	Research Problems and Literature Review
	Identifying and defining a research topic: the literature review.
	Theoretical Framework and Hypothesis Development
	The nature of theory: concepts, variables, the theoretical framework, hypotheses; deduction and induction; the nature of causality in the social sciences; dependent and independent variables.
	<u>Measurement</u> Measurement: types of scales; concepts and their dimensions; variables; Likert and other scales; validity and reliability; use of existing scales.
	Data Collection Methods and Sampling Questionnaire design; ways of administering questionnaires; survey and sampling methods; causes of bias in surveys; causal and correlational studies; experimental designs; internal and external validity; quasi experiments.
	Exploratory research: reasons for and methods.
	Qualitative research: ethnography; grounded theory; problems of data collection and analysis; analytical versus statistical generalizability.
	Case study research: the study questions, propositions, units of analysis, criteria for interpreting the findings; qualitative and quantitative aspects; evaluation as an example of case studies.
	Data Analysis and Interpretation Data analysis and interpretation; basic concepts involved in statistical analysis; data science; outline of the use of some multivariate statistics.
	<u>The Research Report</u> Purposes; audience; characteristics of a well-written report; integral parts of the report.
	<u>Research Ethics</u> The politics of management research; stakeholders; access to
	information. The ethics of management research; the PolyU's
	requirements.
	Plagiarism in academic writing and how to avoid it.
Teaching/Learning Methodology	Lectures cover the core principles and concepts of the subject syllabus. Seminars are structured to enhance students' understanding of relevant concepts through various kinds of activities, including presentation and discussion. Occasionally various staff members will visit the class to discuss on-going research projects with which they are involved.

Subject Code	MM5112
Subject Title	Organization and Management
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/ Co-requisite/ Exclusion	Exclusion: Managing Organizations and People (MM511 or MM5117 or MM5119)
Objectives	This course aims to introduce students to concepts and practices of the four basic management functions of planning, organizing, leading and controlling. It aims to facilitate students to acquire a good grounding for further studies in more specialized management subjects, and to apply theories to practice in becoming more effective managers.
Intended Learning	Upon completion of the subject, students will be able to:
Outcomes	 j. practice the four basic management functions of planning, organizing, leading and controlling, and managerial ethics; k. apply theories to diagnose and solve entrepreneurial and organisational issues; l. synthesize new ideas from various sources, with a consideration of the implications of technology.
Subject Synopsis/ Indicative Syllabus	Managing Organizations and People: An Overview Definitions of management, organization and organizational behaviour. History of management. The organization environment. International management. Contemporary management issues.
	Decision Making Models of management decision making. Managerial ethics and social responsibility.
	Management Functions The planning process and strategic planning. The organizing process and organizational structures. The leading process and people management. The controlling process and controlling techniques.
	People Management Skills Group and team dynamics. Leadership models. Communication models. Conflict resolution models. The management of corporate values and culture. Management of change and organizational development.
Teaching/Learning Methodology	Lectures are used to impart management and organizational concepts which are explored in greater detail via case studies. Students will learn management skills through participative experiential class exercises. Synthesis and application of knowledge are assessed by means of presentation, essays and examination.

Subject Description Form

Subject Code	MM544
Subject Title	E-Commerce
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	The central goal of this course is to develop an integrative knowledge of the digital economy. It focuses on the information superhighway as the technological enabler that has dramatically changed the way in which companies orchestrate their value creation. This course, with a strategic perspective in mind, looks into the knowledge-enabled enterprises and the influence of electronic commerce in shaping the rules of modern business environments. From a managerial point of view, the course will delineate the skills and knowledge required in the digital world. Finally, this course also offers a technology perspective that touches upon the underlying IT mechanisms for electronic commerce.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: q. comprehend the underlying economic mechanisms and driving forces of E-Commerce; r. understand the critical building blocks of E-Commerce and different types of prevailing business models employed by leading industrial leaders; s. appraise the opportunities and potential to apply and synthesize a variety of E-Commerce concepts and solutions to create business value for organizations, customers, and business partners; t. formulate E-Commerce strategies that lever firms' core competencies, facilitate organizational transformation, and foster innovation; u. undertake planning, organizing, and implementing of E-Commerce initiatives to effectively respond to of dynamic market environments, understand cloud computing and acquire skills related to data science.
Subject Synopsis/ Indicative Syllabus	 Introduction of e-Commerce E-commerce Framework B2C, B2B, C2C, E-commerce Supply Chain Management Payment System, Internet Banking and Supporting Systems Mobile Commerce Social Media and e-Commerce Shared Economy Cloud Computing and Data Science Legal, ethical and societal issues of e-Commerce [#]The above syllabus may be modified and updated by each subject lecturer without prior notice.

			.1 1	• 1		1 1	. 1 .
Teaching/Learning Methodology	 The course will use a variety of methods as its pedagogy to help students achieve the above learning outcomes. Each class will roughly take the following format: 1. General announcement and an opportunity for students to ask question to address any unfinished thoughts from the previous class; 2. Overview of the current class agenda and its relationships to past discussion; 3. Extended period of students- or instructor-lead discussion of the key issues in the assigned case or readings. Collaborative learning strategies (learning via discussion in a small group) may be employed during part of this time.

Subject Description Form

Subject Code	MM576
Subject Title	Marketing Management
Credit Value	3
Level	5
Normal Duration	1-semester
Pre-requisite/ Co-requisite/ Exclusion	None
Objectives	This subject provides an introduction to the theory and practice of Marketing at a post- graduate level. The idea is to give students who may have little previous exposure to Marketing a basic working knowledge of the typical marketing environment and marketing mix: product, price, promotion and distribution. The subject is also designed to introduce students to a wide range of current topics, such as customer relationship management (CRM), brand equity management, service marketing, digital marketing, and database marketing, etc. A broad range of marketing topics is conducted with an emphasis on the concepts, which a marketing manager needs to understand in order to make effective decisions.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: v. design marketing activities in an organization, and assess their impact on marketing performance in a global setting; w. develop strategies to achieve marketing objectives; x. apply market segmentation, targeting and positioning with optimal marketing mix; y. appreciate the use of latest technology in designing and implementing marketing programs z. evaluate the ethical issues that relate to marketing.
Subject Synopsis/ Indicative Syllabus	 The Scope of Marketing Exchange and transactions, company orientations towards the marketplace and the fundamental marketing concepts, trends and task. Marketing ethics and social responsibilities. Developing Marketing Strategies and Plans A Holistic Marketing Orientation and Customer Value. The role of marketing in strategic planning. Gathering Information and Scanning the Environment Analyzing the marketing environment. The Marketing Information System. Creating Customer Value, satisfaction and loyalty and cultivating customer relationship. Analyzing Consumer and Business Markets Segmentation, market targeting and positioning. Building a strong branding strategy.

	Developing the Marketing Setting the product, price, pl	ace and prom	otion st	rategies	5.		
	<u>Technology and Marketing</u> The impacts of technology on marketing						
Teaching/Learning Methodology	The format for the course will be class lectures, followed by case discussion and/or group presentation sessions. Besides the textbook specified in this course outline, selected journal articles will be provided to students that cover a wide range of marketing topics. The intention is to allow students to absorb viewpoints from various scholars and learn to appreciate academic research studies. Students are expected to review the articles beforehand and share their views during class discussions. Active participation is fully encouraged.
