The Hong Kong Polytechnic University

Subject Description Form

Subject Code	LGT3022
Subject Title	Marine Navigation and Meteorology
Credit Value	3
Level	3
Normal Duration	1-semester
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	This subject provides students with basic understanding of meteorology and navigation at sea in order to develop their foundation knowledge for studying high-level courses related to maritime transportation. This subject also raises students' awareness on the importance of quality personnel and proper use of modern technologies to maritime safety management.
Intended Learning Outcomes	 Upon completion of the subject, students will be able to: a. Identify and inter-relate the various physical principles which determine the conduct of maritime transportation. b. Assess all possible limitations which may be imposed by the internal and external environments within which ships and ports operate. c. Evaluate navigational/meteorological information for directing the safe navigation of a ship. d. Recommend solutions to minimising potential risks that arise from the dynamic maritime environment surrounding a ship. e. Appraise the need for adopting weather routing services and using it to determine the optimum route for a voyage. f. Master the basic techniques of applying conventional position fixing principles and assess the impact of associated modern technologies on safety of maritime transportation. Studying this subject will also help develop students' skills in critical thinking and arouse their interest in life-long learning to keep abreast of modern marine technology, and enhance their awareness of social responsibility in maritime safety.
Subject Synopsis/ Indicative Syllabus	Principles of position finding, position monitoring and vessel orientation, methods and instrumentation used in practice; the procedures applicable to ocean and coastal navigation; the use of navigational instrumentation; data sources and usage; track keeping, accuracies and errors. Applications in port approach and harbour surveys; Global and local atmospheric and ocean dynamics. The characteristics of climatic and weather systems; Meteorological and oceanographic factors affecting shipping and the instrumentation for their assessment. Occurrence and effect of natural phenomena upon trade and

	shipping. Winds, currents and tides and their effect on shipping and transport. Climate, seasons and seasonal hazards such as typhoons and ice. The use of weather routing services.								
Teaching/Learning Methodology	Lectures will be used to present the basic technical material and illustrate its use. Tutorials will be used for problem classes where students can check their solutions to exercises and resolve problems with their understanding of the topics. Students will be motivated to broaden their knowledge and to deepen their understanding of some selected topics through problem-based learning activities.								
Assessment Methods in Alignment with Intended Learning Outcomes	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						
			а	b	c	d	e	f	
	Coursework	40%		\checkmark	\checkmark	\checkmark			
	Examination	60%	\checkmark		~		~	\checkmark	
	Total	100 %		1		1	1	1	
Student Study Effort	intended learning outcomes: Assignment and/or written test can be designed to test students' ability to apply common senses and technical knowledge in evaluation of relevant information and to provide recommendations for safe voyage of a ship. These methods of assessment can facilitate measurement of the learning outcomes (b), (c) and (d). Written examination is an assessment method appropriate for testing students' understanding of concepts relating to certain technical requirements, acquaintance with the practices / principles of solving technical problems in weather routing and marine navigation. Written examination can be designed to measure the learning outcomes (a), (c), (e) and (f).								
Expected	Lecture					26 Hrs			
	Tutorial Other student study effort:					13 Hrs.			
	 Self-study / research for self-learning tasks 					40 to 59 Hrs.			
	 Assignment / preparation for examination / test 					28 to 35 Hrs.			
	Total student study effor	t				107	7 to 133	3 Hrs.
