

# The Hong Kong Polytechnic University

## Subject Description Form

<b>Subject Code</b>	LGT3526
<b>Subject Title</b>	Machinery and Control Systems
<b>Credit Value</b>	3
<b>Level</b>	3
<b>Normal Duration</b>	1-semester
<b>Pre-requisite / Co-requisite/ Exclusion</b>	Nil
<b>Role and Purposes</b>	The role of this subject is to enable students to develop the ability of evaluating the relationship between the effective management of vessels and the characteristics of their design, including cargo, propulsion and control systems. An emphasis is on correct and safe procedures.
<b>Subject Learning Outcomes</b>	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"><li>Explain the operation of all ship machinery and safe operating procedures.</li><li>Analyse the functions of machinery and control systems that are essential to the normal and safe operation of a ship.</li><li>Be aware of the greater importance attached to cost-effective operation of ships in terms of equipment reliability, more fuel-efficient engines and the ever-increasing shift towards automatically operated machinery.</li><li>Evaluate the performance of shipboard engineering systems in the context of complying with the international standards.</li><li>Formulate appropriate operational standards to meet the requirement of effective management of a vessel and the obligations of ensuring maritime safety.</li><li>Communicate with engineering professionals effectively.</li></ol> <p>Studying this subject will also help develop students' skills in critical thinking and arouse their interest in life-long learning to keep abreast of automated control system technology, and enhance their awareness of social responsibility in maritime safety.</p>

<b>Subject Synopsis/ Indicative Syllabus</b>	Differences in ship design - bulk carrier, tanker, and container ship; resistance of displacement and non-displacement systems; mono-hull and multi-hulls design; dynamically supported crafts; the economics of choice; Marine Engineering Systems: Propulsion; power and performance of various alternative systems; steering, electrical, auxiliary and refrigeration systems, survey and certification requirements of machinery and control systems; Control Systems: Principles and applications of automatic control; important performance parameters; control devices and examples; characteristics of PID control action; servomechanism; integrated monitoring systems.																																																				
<b>Teaching/Learning Methodology</b>	Lectures will be used to introduce to students the concepts, principles, theories, application issues and descriptive cases for the topics. Different teaching materials will be used to cover the most updated development and applications of machinery and control systems. Laboratories will be used to provide students with hands-on practice using simulation experiments.																																																				
<b>Assessment Methods in Alignment with Intended Learning Outcomes</b>	<table border="1" data-bbox="517 913 1465 1339"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th>f</th> </tr> </thead> <tbody> <tr> <td>1. Coursework</td> <td>40 %</td> <td></td> <td>✓</td> <td></td> <td>✓</td> <td>✓</td> <td></td> </tr> <tr> <td>2. Examination</td> <td>60 %</td> <td>✓</td> <td></td> <td>✓</td> <td>✓</td> <td></td> <td>✓</td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td><b>Total</b></td> <td><b>100 %</b></td> <td colspan="6"></td> </tr> </tbody> </table> <p data-bbox="517 1352 1353 1429">Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes:</p> <p data-bbox="517 1442 1442 1630">Weekly laboratory tasks, practical test, and written examination are the typical assessment methods used in this subject. The tasks of laboratory ensure students to acquire essential knowledge in technical contents. Mini-project can test students' mastery of technical knowledge in selected topics.</p> <p data-bbox="517 1644 1452 1800">Since the course focuses on technical knowledge, written examination is designed to assess student's overall understanding of technical concepts and correct use of terminologies for effective communication with professionals.</p> <p data-bbox="517 1814 1465 1890"><i>To pass this subject, students are required to obtain Grade D or above in BOTH the Continuous Assessment and Exam components.</i></p>							Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)						a	b	c	d	e	f	1. Coursework	40 %		✓		✓	✓		2. Examination	60 %	✓		✓	✓		✓									<b>Total</b>	<b>100 %</b>

<b>Student Study Effort Expected</b>	Class contact:																																																				
	▪ Lecture						26 Hrs.																																														
	▪ Laboratory						21 Hrs.																																														

	Other student study effort:	
	▪ Self study / research for self-learning tasks	28 to 56 Hrs.
	▪ Self practice for practical tests / preparation for examination	20 to 30 Hrs.
	Total student study effort	97 to 135 Hrs.
